

220v high temperature silicone heat tape is a silicone rubber heating belt with high heating temperature. The highest heating temperature can reach 120°C. It is recommended to be used with a thermostat to accurately control the temperature. The width of the heating belt is usually 15-30mm, and the maximum can be customized 50mm, and the length is normal 1 -10 meters, the maximum can reach 30m.

220v high temperature silicone heat tape external structure

**Silicone rubber heating cable,
waterproof and resistant to high temperature**

220v high temperature silicone heat tape Installation diagram

Installation method of silicone rubber heating cable

220v high temperature silicone heat tape Installation method:

First wrap the heating tape on the surface of the pipe, cooperate with the adjustable temperature controller, and wrap it with aluminum foil tape to fix and keep it warm after installation, and then plug in the power supply.

220v high temperature silicone heat tape Scope of use

All kinds of pipe heating and insulation, water pipe antifreeze, drain pipe, water tank, can be wrapped outside, or placed in water, if you feel that the [self-limiting temperature heating cable](#) has low heat, not just antifreeze and heat preservation, choose this one with higher heat Silicone rubber heating is very suitable.
